## Windows XP/Server 2003 - List of Locale IDs, Input Locale, and Language Collection

Posted: May 29, 2003

The following table lists Locale IDs (LCIDs) and Locale ID:Input Locale combinations. It contains all the locales and languages supported by Windows XP. Use it to find the language collection you need to install in order to enable you to input/display language(s), and in installing language support during unattend installations of Windows XP operating system. For more details about how to use this information, see:

- [New XP Locale and Language Features](#)
- [Unattended installation documentation](#)

**Notes:** The change to using "language collections" in Windows XP does not affect the use of unattend and maintenance scripts to install support for additional languages. In XP, installing any one of the languages in one collection will automatically install all the other languages within that collection. You can continue using the Windows 2000 unattend script. The difference would be that an answer file specifying Language Group 8 (Korean) will invoke the installation of Language Groups 7, 9 and 10 too.

The (strongly) recommended answer file key for installing a locale is the Language key. This key prevents the installation of separate, possibly invalid, combinations of System Locale, User Locale, and Input Locales, and will automatically install locales appropriate for the Language / Locale specified.

If you do need to install the locale through the use of separate InputLocale, SystemLocale and UserLocale keys, it is extremely important to ensure that the combination of the three locales is valid. You can use the table below to identify valid combinations for each LCID.

For more information about the System Locale, User Locale, and Input Locales, see our [Locales and Language Groups FAQ](#).

Locale	LCID Hex	LCID Dec	Valid Locale ID:Input Locale combinations	Language Collection
Afrikaans	0436	1078	0436:00000409, 0409:00000409	Basic
